EXPERIMENT

Title

TOSS AND SCORE

Description

You are playing a game of Toss and Score in the Hillwood City Mall with your friends. The game consists of the following rules:

Toss an unbiased coin multiple times.

For each heads you get 2 points and for each tails you lose 1 point.

The game ends as soon as you get 3 heads in a row, or you toss the coin throughout the length of string S.

You have been given a string S consisting of letters H (for heads) and T (for tails) denoting the sequence results you get on the toss of coin N times. Your task is to find and return an integer value representing the final score you get once the game ends.

Note: The final score can be negative too.

Input Specification:

Input1: A string s, representing the sequence of results you get on the toss of coin N times.

Sample Input:

HHHTT

Output:

6

Source Code:

```
def final_score(S):
    score = 0
    consecutive_heads = 0
    for res in S:
        if res == 'H':
            score += 2
            consecutive_heads += 1
            if consecutive_heads == 3:
                break
        else :
            score -= 1
            consecutive_heads = 0
    return score
S = input()
print(final_score(S))
```

RESULT

5 / 5 Test Cases Passed | 100 %
