Logo 21A95HA 23D21A05HA 23D21 STUDENT REPORT Name SAM **DETAILS** Roll Number 23D21A05H4 EXPERIMENT Title LAOSHA 23021AOSHA 2302 **Source Code:** Description Let's consider a scenario where there are K candies to be def last(N,K,A): distributed among N children, each uniquely numbered from 1 to N. The distribution commences with Child A, N,K,A = map(int,input().split()) followed by a sequential allocation to the subsequent children in the order: A, A+1, A+2,..., N. The query at hand is to identify which child will be the last recipient of a In more explicit terms, after Child x (where  $1 \le x \le N$ ) receives a candy, the subsequent candy is granted to Child x+1. Upon Child N receiving a candy, the distribution cycle restarts. and Child 1 becomes the next recipient. The primary objective is to ascertain the identity of the child who will receive the last candy in this cyclic distribution. Note: Each child receives only 1 candy. **Input Format:** The first line of input contains 3 space seperated integers N, K and A. **Output Format:** Print the friend who will be the final recipient of the candy. **Constraints:** 1<=N<=K<=10^8 Sample Input: 521 Sample Output: 2 RESULT 6 / 6 Test Cases Passed | 100 %
